DESCRIPTION OF SERVICE

3.5 Optional Calling Features (Cont'd)

3.5.2 Feature Descriptions (Cont'd)

- O. Remote Call Forwarding - Remote Call Forwarding (RCF) is a local exchange telecommunications service feature whereby all calls dialed to a telephone number equipped for RCF are automatically forwarded to another dialable exchange or 8XX Service telephone number. The calling party pays only the applicable charges to call the number equipped with an RCF feature, while the RCF Customer pays the applicable charges for the forwarded portion of the call.

Remote Call Forwarding service is offered subject to availability of suitable facilities. Remote Call Forwarding service is not offered where the terminating station is a coin telephone. The Company will not provide identification of the originating telephone number to the RCF Customer. Transmission characteristics may vary depending on the distance and routing necessary to complete the remotely forwarded call. Therefore, the normal grade end-to-end transmission is not guaranteed on such calls.

Each Remote Call Forwarding feature allows for forwarding one call at a given time. An additional path is necessary for each additional call to be forwarded simultaneously.

- P. Multiple Directory Number Distinctive Ringing: This feature allows an end user to determine the source of an incoming call from a distinctive ring. The end user may have up to two additional numbers assigned to a single line (i.e. Distinctive Ringing - First Number and Distinctive Ringing - Second Number). The designated primary number will receive a normal ringing pattern, other numbers will receive distinctive ringing patterns. The pattern is based on the telephone number that the calling party dials.

RATES

4.1 Application of Rates and Charges

All services offered in this tariff are subject to Service Order, Nonrecurring, Monthly Recurring, and Usage Charges.

4.1.1 Call Timing for Usage Sensitive Services

Where charges for a service are specified based on the duration of use, such as the duration of a telephone call, the following rules apply:

- A. Calls are measured in durational increments identified for each service. All calls which are fractions of a measurement increment are rounded-up to the next whole unit.
- B. Timing on completed calls begins when the call is answered by the called party. Answering is determined by hardware answer supervision in all cases where this signaling is provided by the terminating local carrier and any intermediate carrier(s).
- C. Timing terminates on all calls when the calling party hangs up or the Company's network receives an off-hook signal from the terminating carrier.
- D. Calls originating in one time period and terminating in another will be billed in proportion to the rates in effect during different segments of the call.
- E. All times refer to local time.

RATES

4.1 Application of Rates and Charges (Cont'd)

4.1.2 Distance Calculations

Where charges for a service are specified based upon distance, the following rules apply:

A. Distance between two points is measured as airline distance between the rate centers of the originating and terminating telephone lines. The rate center is a set of geographic coordinates, as referenced in Local Exchange Routing Guide, associated with each NPA-NXX combination.

B. The airline distance between any two rate centers is determined as follows:

Step 1: Obtain the "V" (vertical) and "H" (horizontal) coordinates for each Rate Center from the above-referenced Bellcore document.

Step 2: Compute the difference between the "V" coordinates of the two rate centers; and the difference between the two "H" coordinates.

Step 3: Square each difference obtained in step (b) above.

Step 4: Add the square of the "V" difference and the square of the "H" difference obtained in step C) above.

Step 5: Divide the sum of the squares by 10. Round to the next higher whole number if any fraction is obtained.

Step 6: Obtain the square root of the whole number result obtained above. Round to the next higher whole number if any fraction is obtained. This is the airline mileage.

C. The formula for distance calculations is:
